EEG TESTING

Electroencephalogram (EEG) measures the brain electrical activity (brain waves). An EEG might be used to diagnose and monitor seizure activity and help to evaluate brain tumors, neurodegenerative diseases, memory loss and other neurological conditions.

We ask that you kindly follow these pre-test instructions:

- Have clean dry hair, SHAMPOO ONLY(no conditioner, oils, hair styling products)
- Remove any and all hair extensions, glue and clips
- Undo braided hair
- Wigs and hair pieces we ask that you remove these during the test

What to expect for the EEG Exam:

A technologist will place a cap with 21-23 small disks (electrodes) on your scalp using a water based gel. You will be asked to sit quietly with your eyes closed for 20 minutes while the equipment is connected to the electrodes recording your brain electrical activity.

If you have any questions do not hesitate to call the office at. You can confirm your next appointment or request to reschedule by email.
